Learn how to set your institution location for WorldCat registry in OCLC Service Configuration.

Use this screen to set your institution's location on a map. To access this screen, sign in to [OCLC Service Configuration](#), open the **WorldCat Registry** left navigation, and select **Map**. Drag the red marker to specify the institution's physical location, or click the **Move red marker to Google's calculated latitude/longitude** link to use the normalized latitude and longitude values for this record. You can set a different location for each address you have set in the WorldCat registry.

When you are finished, click **Save Changes** to save, or **Cancel** to start over.
